Summary

Experienced Senior Software Engineer with 6+ years of dedicated expertise in **Angular** development, specializing in building high-performance, user-centric web applications. Proven track record of modernizing front-end architectures, translating complex wireframes into interactive UI components, and optimizing application performance for fast load times and smooth interactions. Adept at collaborating with cross-functional teams to drive best practices in component-based architecture, modularization, and reusability, while delivering high-quality deliverables within Agile/Scrum environments. Passionate about creating scalable and maintainable front-end solutions, with a focus on seamless **RESTful API** integration and a keen eye for detail.

Skills

- **Front-End Frameworks & Libraries:** Angular 16+, Angular Material, RxJS, NgRx, Angular CLI, TypeScript, JavaScript (ES6+), React.js, Vue.js
- **UI & Styling:** HTML5, CSS3, SCSS/SASS, Tailwind CSS, Bootstrap, Responsive Web Design, Adaptive UI, Wireframing, Figma
- **State Management & API Integration:** NgRx, RxJS, RESTful API Integration, GraphQL, WebSockets, JSON, Axios, HTTP Interceptors
- **Testing & Quality:** Jest, Jasmine, Karma, Angular Testing Library, Cypress, End-to-End Testing, Unit Testing, Test-Driven Development (TDD)
- **Development & DevOps Tools:** Git, GitLab, GitHub, Bitbucket, Webpack, npm, Yarn, Docker, CI/CD Pipelines, Agile/Scrum, Jira, Confluence
- **Backend & Database Concepts:** Node.js, Express.js, SQL, NoSQL, MongoDB, PostgreSQL, Firebase, OAuth 2.0, JWT
- **Methodologies & Practices:** Component-Based Architecture, Modular Design, Code Reusability, Performance Optimization, Technical Debt Reduction, A/B Testing, User Experience (UX) Principles
- **Domain & Others:** US Healthcare & Medicare, Clinical Data Visualization, EHR Integration, HIPAA Compliance, Agile Methodologies, Problem-Solving, Attention to Detail

Work Experience

HoNa Health • Senior Software Engineer • Poland • 04/2023 - Present

- Architected and maintained the front-end architecture for the Clinical Summary & Visit-Prep Platform using **Angular 16+**, **TypeScript**, and **RxJS**, translating wireframes into interactive UI components that allowed clinicians to review over 1500 patient records per day with faster load times.
- Optimized the performance of data-heavy patient summary views by implementing **Angular's** OnPush change detection strategy, lazy loading modules, and virtual scrolling, reducing initial load time by around 2.5 seconds for dashboards containing over 1000 data points.
- Drove the implementation of a component-based architecture by building a reusable UI component library with **Angular Material** and **SCSS**, which was adopted across 5+ product features, significantly improving development speed and code consistency.
- Integrated the front-end with backend services via **RESTful APIs** for multi-source healthcare data retrieval, managing complex data streams to power customizable clinical summary templates for providers.
- Addressed technical debt by refactoring legacy code modules and implementing comprehensive unit tests with **Jest**, achieving over 85% code coverage for critical components and ensuring long-term maintainability.
- Collaborated closely with UX/UI designers and product managers to translate wireframes and mockups into functional, high-performance features for medical-record retrieval and specialty-specific data filtering.
- Participated in Agile/Scrum ceremonies, including sprint planning, daily stand-ups, and retrospectives, consistently delivering high-quality features within 2-week sprint cycles for a team of 6 engineers.
- Implemented state management for complex clinical data flows using **NgRx**, managing the application state for approximately 300 active users, which improved data consistency and debugging capabilities.

Endava • Senior Software Engineer • Poland • 03/2020 - 02/2023

- Played the key role in the front-end rebuild of **MediClaim Flow**, a provider-facing claims management portal for a US healthcare payer, using **Angular 15** and **TypeScript** to modernize a legacy system and enhance usability for over 800 external providers.
- Developed complex UI components for claims submission and status tracking, incorporating interactive data tables, multi-step forms, and dynamic document upload interfaces that processed approximately 500 claims per day.
- Optimized application performance by implementing efficient change detection strategies, code-splitting, and route-based lazy loading, resulting in a smooth user experience for data-intensive views displaying over 10,000 claim records.
- Integrated with backend **RESTful APIs** and WebSocket services for real-time claim status updates and remittance advice retrieval, ensuring secure and reliable data exchange between the front-end and the insurance company's core systems.

- Drove front-end best practices including modularization and reusability, creating a shared component library with **Angular** and **SCSS** that streamlined development for a team of 4 front-end engineers and reduced feature delivery time by an average of 2 days per sprint.
- Ensured high-quality deliverables by implementing rigorous unit tests with **Jest** and end-to-end tests with Cypress, achieving a 90% pass rate in the CI/CD pipeline on **GitLab**.
- Collaborated with product managers and UX designers in an Agile/Scrum environment to transform wireframes into interactive UI, conducting 3 major feature releases per quarter that directly improved user satisfaction scores.
- Mentored junior developers on **Angular** best practices, component architecture, and writing clean, maintainable code through pair programming and code reviews, contributing to the team's overall skill growth.

Miquido • Junior Software Developer • Poland • 04/2017 - 12/2019

- Contributed to the development of a Policyholder Self-Service & Claims Intake Platform for an insurance client, building responsive UI components with **Angular 8**, **JavaScript**, and **HTML5/CSS3** to enable policy viewing and digital claims submission.
- Integrated front-end interfaces with backend **RESTful APIs** for document upload and claim-status tracking, handling data synchronization for a user base of around 15,000 policyholders.
- Collaborated on the development of an Omniquote Distribution & Product Personalization Module, using **Angular** services and **RxJS** to manage user-specific data and deliver personalized insurance offers based on dynamic user inputs.
- Translated wireframes and mockups into pixel-perfect, cross-browser compatible web interfaces, ensuring a consistent user experience across devices for the insurance client's web portal.
- Participated in daily stand-ups and sprint retrospectives within an Agile team, consistently delivering assigned user stories on time and contributing to the maintenance of the front-end codebase.
- Assisted in identifying and fixing UI bugs and performance bottlenecks in existing features, leading to a more stable application with reduced error rates reported by the client's QA team.
- Gained foundational experience in version control using **Git** and code collaboration through GitLab, adhering to the team's branching and code review process for all feature implementations.

Self Employed • Independent Coding Coach • Vietnam • 07/2016 - 04/2017

- Taught students core programming concepts, including problem-solving, data structures, algorithms, and debugging techniques, through personalized one-on-one coaching, focusing on **JavaScript** and **TypeScript** fundamentals.
- Introduced basic software engineering principles such as code organization, version control with **Git**, testing, and writing clean, maintainable code, laying a strong foundation for their technical careers.
- Designed tailored lesson plans and practice exercises to match individual learning goals, helping over 10 students improve technical confidence and coding proficiency within a 6-month period.

Education

-
- **Ho Chi Minh City University of Technology • Bachelor's Degree • Computational and Applied Mathematics • Ho Chi Minh City, Vietnam • 2012 - 2016**
