

Cristian Chantarangsu

Senior Data Engineer

Braşov, Romania • cristian.c.0808@hotmail.com • linkedin.com/in/cristian-chantarangsu-b5b931393/

Summary

Experienced Senior Data Engineer with over 8 years of experience designing and optimizing analytics data solutions across healthcare, retail analytics, and pharmaceutical data environments. Specialized in building end-to-end analytics engineering workflows using modern cloud data warehouses, dbt transformations, and Python-based data pipelines to deliver business-ready datasets. Proven ability to translate complex business requirements into well-structured dimensional models and trusted data marts supporting experimentation, reporting, and operational insights. Strong expertise in data quality, governance, and performance tuning, enabling organizations to leverage reliable and well-documented data assets for strategic decision-making.

Skills

- **Data Warehousing:** Snowflake, BigQuery, Redshift, Databricks, Data Lake, Data Warehouse Architecture
- **Analytics Engineering:** dbt, Data Modeling, Dimensional Modeling, Star Schema, One Big Table, Semantic Layer Design
- **Programming:** Python, SQL, PySpark, Pandas, NumPy
- **Orchestration & Workflow:** Apache Airflow, DAG Design, Scheduling Pipelines, Workflow Automation
- **Data Governance & Quality:** Data Testing, Data Validation, GDPR, CCPA, SOX, Data Lineage, Data Contracts
- **DevOps & Version Control:** Git, CI/CD, GitHub Actions, Code Versioning, Deployment Pipelines
- **Performance Optimization:** Query Optimization, Partitioning, Clustering, Cost Optimization
- **Analytics & BI:** Data Marts, Business Metrics Design, A/B Testing Support, Tableau, Looker

Work Experience

Fresenius Medical Care • Senior Data Engineer • 06/2023 - Present

- Designed and implemented enterprise-grade dimensional models for the Apollo Global Clinical Data Platform, transforming raw clinical and treatment datasets into curated analytical layers using **dbt, SQL, Snowflake**.
- Built and maintained complex transformation pipelines to process around 50 million clinical records and treatment events across multiple regions, ensuring consistent schema evolution and traceability using **dbt, Python, Airflow**.
- Developed optimized SQL models and materializations that significantly improved query execution efficiency for analytical workloads consumed by data analysts and medical research teams using **SQL, Query Optimization, Snowflake**.
- Implemented robust data quality testing frameworks with automated validation rules and anomaly detection to ensure reliability of curated datasets using **dbt Tests, Python, Data Validation**.
- Collaborated with data scientists and business stakeholders to translate healthcare analytics requirements into reusable and well-documented data marts supporting clinical insights and reporting using **Dimensional Modeling, Data Marts, Business Logic**.
- Defined and enforced data contracts between ingestion and transformation layers to maintain schema stability and minimize downstream data issues using **Data Governance, Data Contracts, Git**.
- Supported compliance requirements for sensitive healthcare data by integrating privacy controls and governance standards aligned with **GDPR, SOX, Data Security**.

Capgemini • Data Engineer • 09/2020 - 05/2023

- Developed analytics data models for the StorePulse Assortment & Promo Insight Engine, transforming raw POS transactions, loyalty events, and campaign data into structured analytical datasets using **dbt, SQL, BigQuery**.
- Designed fact and dimension tables for orders, customers, promotions, and store performance, enabling consistent metric definitions across merchandising and marketing teams using **Dimensional Modeling, Star Schema, dbt**.
- Built transformation pipelines processing approximately 20 million daily transaction records, ensuring reliable ingestion and transformation flows using **Airflow, Python, SQL**.
- Optimized complex analytical queries used in promotion attribution and customer behavior analysis by restructuring models and leveraging warehouse-specific tuning techniques using **Query Optimization, BigQuery, Partitioning**.
- Implemented automated testing and documentation within dbt projects to improve data reliability and maintain transparency for business users using **dbt Tests, Documentation, Data Lineage**.
- Collaborated closely with analysts to define business metrics such as promo lift, repeat purchase windows, and basket composition, translating them into reusable semantic models using **Business Logic, Data Marts, SQL**.
- Integrated CI/CD pipelines for analytics code deployment and version control workflows, ensuring consistent releases and traceable changes using **Git, CI/CD, GitHub Actions**.
- Enabled self-service analytics by delivering well-structured data marts and documentation that supported reporting tools and experimentation workflows such as campaign analysis and cohort segmentation using **Data Marts, A/B Testing Support, Looker**.

Novartis • Junior Software Developer • 05/2018 - 08/2020

- Contributed to the Nerve Live Data Insight Platform by building data transformation components to unify clinical and operational datasets for analytics consumption using **Python, SQL, Data Pipelines**.
- Developed data ingestion and preprocessing scripts to handle approximately 5 million records from clinical trial systems and operational sources using **Python, Pandas, ETL**.

- Implemented relational and dimensional data structures to support reporting and analytics use cases across R&D workflows using **Data Modeling, Star Schema, SQL**.
- Collaborated with data scientists to prepare curated datasets for downstream analytics and experimentation workflows using **Data Preparation, Python, Analytics Support**.
- Participated in workflow automation and scheduling of data pipelines to ensure timely delivery of analytical datasets using **Airflow, Scheduling, Automation**.
- Maintained version-controlled data transformation scripts and contributed to code reviews to ensure consistency and maintainability using **Git, Code Versioning**.
- Supported compliance and governance initiatives by ensuring proper handling of sensitive healthcare data aligned with **GDPR, Data Governance**.

Education

- **Babes-Bolyai University • Bachelor's Degree in COMPUTER AND INFORMATION SCIENCES AND SUPPORT SERVICES • 2013 - 2017**
