

Jude Malik

.NET Developer

jude.malik36@gmail.com · Wolverhampton, United Kingdom

Professional Summary

Senior Software Engineer with 10+ years of experience developing enterprise applications using C#, .NET, AWS Lambda, AWS RDS, SQL Server, and modern cloud-based architectures. Skilled in designing scalable backend services, optimizing database performance, and delivering secure production systems through clean architecture and automated development workflows. Improved application performance by 45% and reduced operational issues through cloud modernization, database optimization, and engineering best practices. Experienced using GitHub Copilot and AI-assisted workflows to accelerate high-quality software delivery.

Skills

- C#, VB.Net, SQL
- .NET, Razor Pages, REST APIs, ASP.NET
- Unit Testing, Integration Testing, Automated Testing
- SQL Server 2022, AWS RDS, Relational Databases, Database Optimization
- AWS Lambda, Cloud Deployment, CI/CD
- GitHub, GitHub Copilot, SSRS, Version Control, Agile Development

Work Experience

Senior Software Engineer | Endava | United Kingdom | 12/2024 - Present

- Architected enterprise applications using **C#**, **.NET**, **AWS Lambda**, and **AWS RDS** to deliver scalable backend services supporting complex business workflows, improving application performance by 45% through optimized architecture and cloud-native design.
- Designed and maintained secure APIs and backend components using **.NET**, object-oriented principles, and clean architecture patterns, improving system maintainability by 40% while supporting high-volume production environments.
- Optimized database operations using **SQL Server 2022**, query tuning, and efficient data access strategies, reducing response times by 35% while improving reliability for critical business processes.
- Implemented development workflows using **GitHub**, automated testing, and CI/CD practices, reducing deployment effort by 50% and improving software delivery consistency across engineering teams.
- Leveraged **GitHub Copilot** and AI-assisted engineering workflows to accelerate implementation, improve code quality, and support faster delivery while maintaining enterprise development standards.

Senior Software Developer | SafeAI | Israel(Remote) | 05/2023 - 11/2024

- Developed scalable backend services using **C#**, **.NET**, **SQL Server**, and cloud technologies for AI-powered platforms, improving system scalability by 40% while supporting growing user demand.

- Built server-side applications and user interfaces using **Razor Pages**, API integrations, and structured backend architecture, reducing feature delivery time by 35% in a startup environment.
- Designed database models and optimized SQL queries using relational database principles, improving data processing performance by 42% across production workflows.
- Implemented automated testing, Git-based workflows, and deployment practices, reducing production defects by 50% and increasing release confidence.
- Applied AI-assisted development techniques using **GitHub Copilot** to improve engineering productivity by 30% while maintaining clean and reliable production code.

Senior Software Developer | Deltologic | Germany(Remote) | 10/2020 - 04/2022

- Built SaaS backend solutions using **C#**, **.NET**, **SQL**, and enterprise application patterns, improving marketplace automation workflows by 40% across multiple customer environments.
- Developed reusable backend components and API services using object-oriented design, improving code maintainability and reducing development effort for future enhancements.
- Managed database performance improvements using **SQL** optimization techniques and structured data access strategies, reducing processing time by 35%.
- Collaborated with distributed engineering teams using **GitHub**, agile practices, and code reviews to deliver reliable software solutions across industries.

Software Developer | Fidobe Solutions LLC | United Arab Emirates | 06/2016 - 09/2020

- Developed enterprise business applications using **C#**, **VB.Net**, **SQL**, and backend development principles, improving operational efficiency by 35% for business users.
- Implemented application modules using object-oriented programming, **SOLID** principles, and database-driven development approaches, improving maintainability by 40%.
- Created reporting solutions using **SSRS**, **SQL** queries, and structured reporting workflows, improving business visibility and decision-making speed.
- Collaborated with senior developers and business stakeholders through version control, testing practices, and technical documentation while building strong software engineering foundations.

Education

Bachelor's Degree, Computer Science

Khalifa University of Science and Technology

2012 - 2016

Certifications

- Certified IT Architect Professional: CITA-P
- Foundational C# Certification: Microsoft & freeCodeCamp
- IBM Full Stack Software Developer Professional Certificate: IBM

Projects

- **Cloud-Based Enterprise Management Platform:** Developed an enterprise backend platform using **C#**, **.NET**, **AWS Lambda**, **AWS RDS**, and **SQL Server**. Built scalable APIs, optimized database operations, automated deployment workflows, and improved application performance by 45% through cloud-native engineering practices.
